Successful Launch of New Gallus CCS 510 Press at St. Neots Packaging Ltd. and New Sandwich Pack

As part of a major investment for a new product launch St. Neots Packaging Ltd. have recently installed a Gallus CCS 510 in-line machine system from Gallus Stanz- und Druckmaschinen GmbH of Weiden Germany.

The total investment in the order of £2,500,000 was carried out to bring to the market a new type of carton sandwich pack which improves shelf life and is also more environmentally friendly than previous pack designs.

The Gallus CCS 510 inline machine system combines reel fed flexo printing, varnish coating, lamination, window punching and die cutting with delivery of the laminated cut blanks for ultimate flexibility in folding carton converting. This press cuts out intermediate steps and so saves on production costs and work in progress time. This means that time from ordering of the packs to delivery for packing can be reduced dramatically. The press completely designed, built, tested and installed in less than 6 months, has many new innovative features which were included through the cooperation of the team at St.

Neots Ltd. and the engineering design team of Gallus.

Gary Orsman (r) , St. Neots MD and Ferdinand Rüesch Jr., Gallus owner
