

World premiere of a new machine platform for label printing at the Gallus Innovation Days 2016

St. Gallen, June 2016 – The second Gallus Innovation Days event will be held from 20 to 22 September this year, again at the Gallus headquarters in St.Gallen, Switzerland, and visitors will once again be treated to a world premiere. Gallus will be presenting the first pre-series model of a new machine generation – a conventional label printing machine, equipped with flexo-printing units, that is designed for the label and packaging market. This machine boasts an innovative new platform construction and can be configured by customers to meet their own market requirements, whether in terms of the level of automation or the web width. Gallus will launch the first series machines with a width of 440 mm. The modular platform principle makes it possible to configure everything from basic models to fully equipped versions with varying degrees of automation according to requirements and business model – all of this, naturally, in the quality you would expect from Gallus.

With its maximum speed of 200 m/min and extremely short setup times, these printing presses are the fastest narrow-web machines that Gallus has ever built. The Gallus engineers paid particular attention to achieving the highest possible level of productivity, using many features such as precise register accuracy regardless of speed, extremely straightforward operation even at low levels of automation, very short web path from printing unit to printing unit, and exceptionally easy changeovers. The sales launch for this new Gallus machine platform will be at the Gallus Innovation Days 2016. The first deliveries are scheduled for the second quarter of 2017.

The Gallus Innovation Days will also showcase other innovations from the Gallus product and service portfolio. The programme of this three-day trade fair is rounded off with presentations by partners and expert contributions on the trends and developments in label printing. You can register for the Gallus Innovation Days 2016 through the Gallus website: www.gallus-group.com.

The Gallus Group

The Gallus Group with its production sites in Switzerland and Germany is the world market leader in the development, production and sale of narrow-web, reel-fed presses designed for label manufacturers. The machine portfolio is augmented by a broad range of screen printing plates (Gallus Screeny), globally decentralised service operations, and a broad offering of printing accessories and replacement parts. The comprehensive portfolio also includes consulting services provided by label experts in all relevant printing and process engineering tasks. The Gallus Group is a member of the Heidelberg Group and employs around 430 people, of whom 253 are based in Switzerland. The group headquarters is in St.Gallen, Switzerland. www.gallus-group.com
